Pharmacy Monitoring

Digital pharmacy safety is here.

Proactive Pharmacy Safety

Pharmacy safety and quality control programs are critical to protecting patients and meeting federal regulations. These programs focus on improving quality standards, reducing losses from spoilage, and avoiding safety incidents. But many pharmacies rely on manual monitoring, which at best gives you point-in-time snapshots, leaving you feeling in the dark and unable to properly manage your pharmacy's safety risk.

SmartSense's Sensing-as-a-Service solutions enable you to gain real-time insights into all your locations. With our remote monitoring system, you gain prescriptive actions and automated checklists, quality control, and risk management.

Gain Visibility & Improve Team Execution

| Fridges & Freezers | Easy NIST Recalibration | Temperature, Humidity, Ambient, and More | Cold Chain |

Environmental data is sent to our cloud-based application. Here, you gain operational transparency and prioritize your response in real-time.

Make Smarter Decisions

SmartSense puts you in control of your operations and lets you make faster, more accurate decisions about your pharmacy. This means better experiences for your customers and patients, as well as improved regulatory compliance for your pharmacy.

Visibility enables informed decisions.

The SmartSense System

The SmartSense system is designed to solve your most important pharmacy safety challenges. The system combines wireless sensors with remote monitoring software and a digital checklist. The results are actionable insights that drive quality control, employee productivity, and regulatory compliance.

Wireless Sensors

Connect any fridge or freezer in minutes with SmartSense's wire-free sensors.

Monitoring Platform

Gain proactive insights and remotely monitor equipment to maintain visibility and automate temperature logging.

Compliance Reporting

Maintain regulatory compliance with on-demand and scheduled reporting.

The SmartSense Difference

Proactive Insights

Gain visibility with predictive models and simulated product temperatures that enable proactive decision making.

Collaborative Monitoring

Drive efficiency with SmartSense's collaborative system for incident management and cross-team workflows.

Deploys in Minutes

Install in minutes with wire-free sensors. Quickly monitor temperature, humidity, tank, energy, and other sensors.

Enterprise Grade

Store & forward technology for lossless monitoring, up to 3-year battery life, IP-67 rated sensors, and AES encryption and certificates.

Compliance Visibility & Efficiency

Meet rigorous CDC, Board of Pharmacy, and VFC twice daily compliance standards. Gain visibility into site performance for improved accountability.
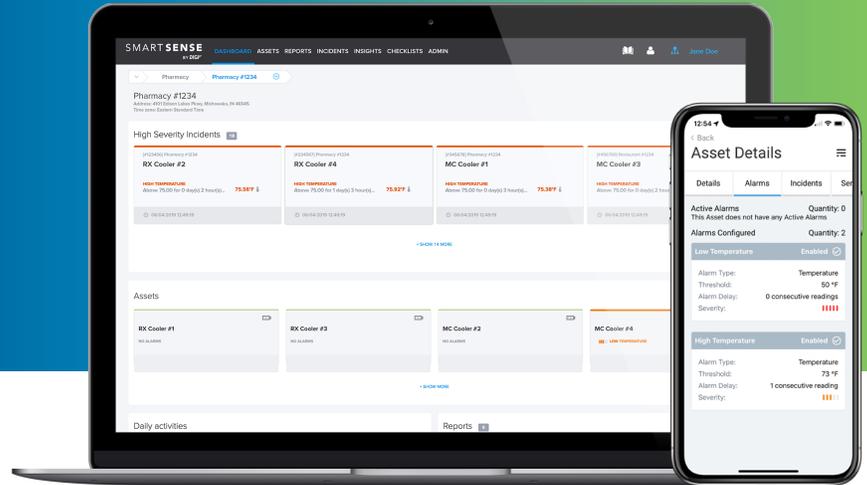

Deployment Experience

We partner with our customers to create world leading systems. We have experience deploying 250 sites per day.

SmartSense Dashboard

SmartSense's cloud-based dashboard provides real-time oversight of your pharmacy safety initiatives and visibility into compliance, site performance, and risks.

Proactive Insights

Make proactive decisions using SmartSense's patented product simulation that provides insight into actual product temperature as well as ambient temperature.

Team-Based Monitoring

Assign incidents to teammates and track corrective action from anywhere with SmartSense's collaborative approach to incident and workflow management.

Automate Reports

Receive automated reports by email to replace paper temperature logs and identify both chronically failing fridges and sites that have the greatest safety risk.
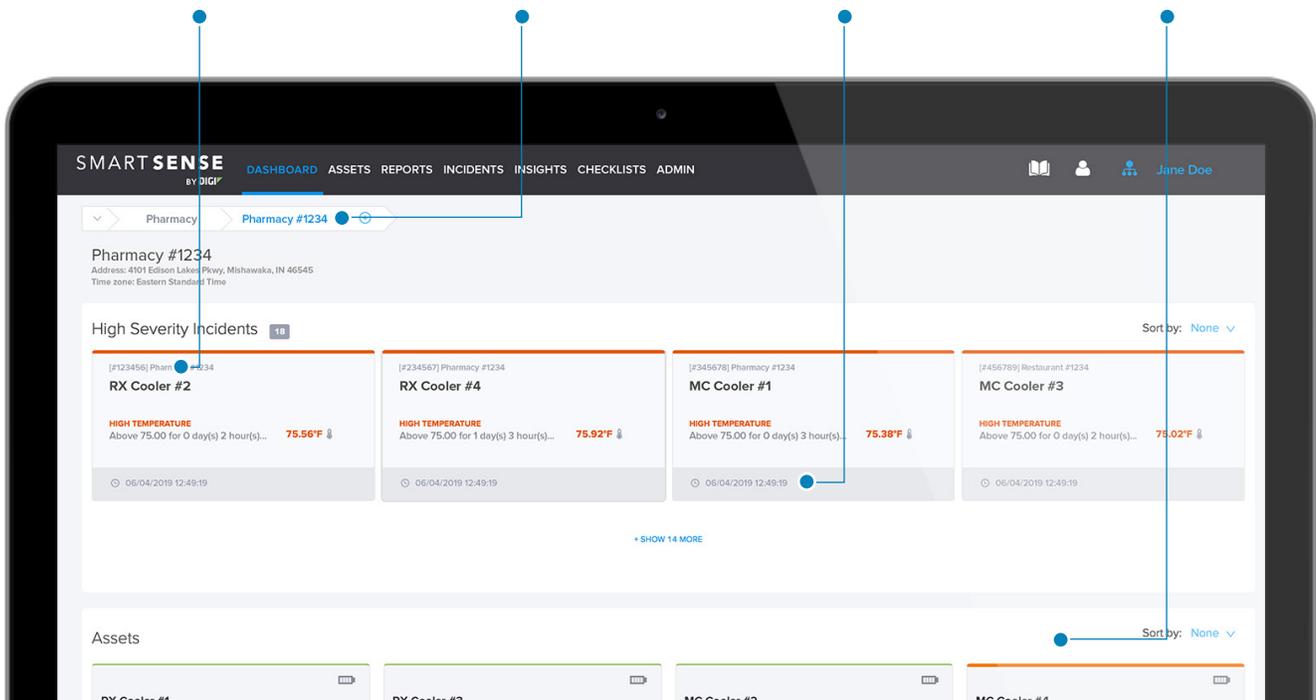

Visibility & Accountability

Gain visibility into your compliance checks and easily measure and compare site performance. Increase accountability with timestamps and signatures.

Prioritize by Severity

Multi-Location Support
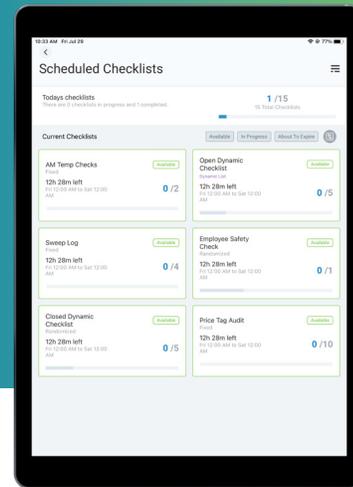

Actionable Context

Manage by Asset

Digital Checklist

SmartSense's digital checklist replaces paper checklists with an intuitive task management system that provides visibility across all your sites.

Visibility & Insights

Gain real-time insights into checklist compliance and easily compare site performance. Quickly identify at-risk sites for immediate remediation.

Integrate Equipment Monitoring

Automate equipment monitoring with seamless integration of SmartSense's wireless sensors with the digital checklist.

Task Management

Remotely publish and manage checklists for pharmacy safety, quality control, receiving, promotions, and more. Easily customize checklists and instantly push to all your sites.

Automate Reports

Schedule automatic or on-demand reports to replace paper logs and checklists. Digital historical data log eliminates the need for paper records.

Wireless Sensors & Screens

SmartSense's wireless sensors offer 100% wire-free installation and wireless screens for deployment in minutes.

100% Wire-Free Installation

Actionable Alerts

Receive both audible and visual notification when sensors are in alarm.

High Contrast Display

High contrast e-ink display provides crystal clear readings.

Easy NIST Recalibration

Simple twist-on NIST probes ensure that recalibration is completed in under a minute.

100% Wire-Free

Deploy in minutes with the industry's only sensor that can be placed directly in fridges and freezers - no wires or cords.
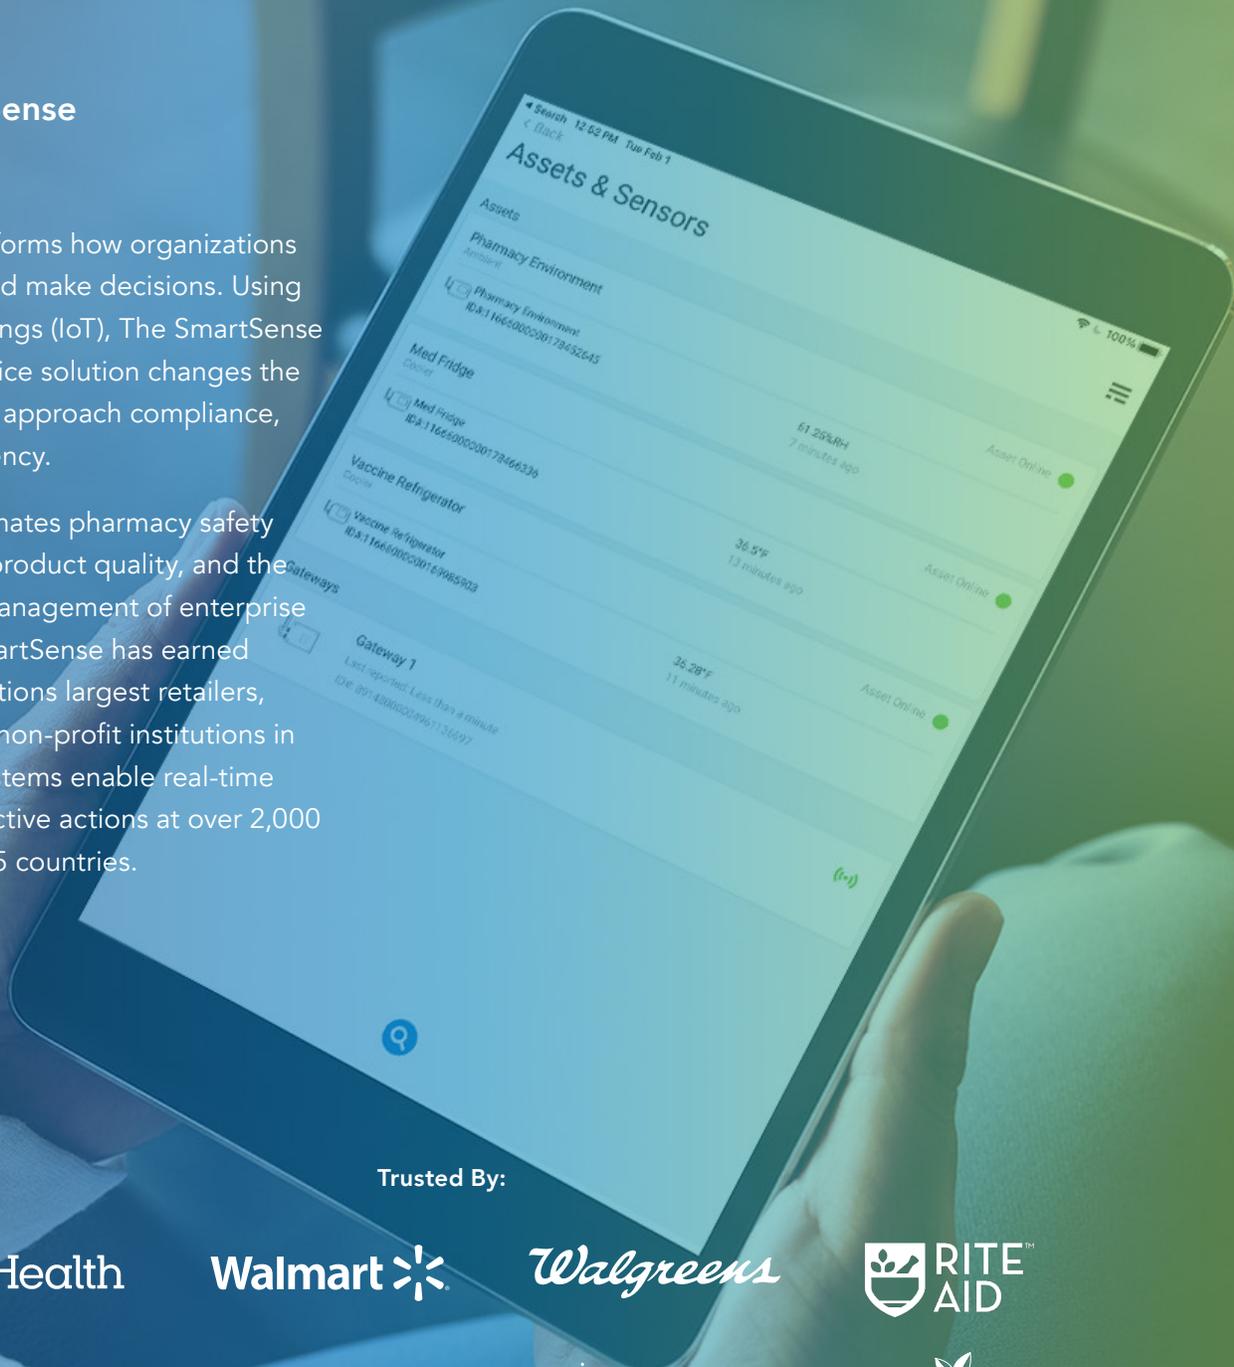

Plug & Play Install

Sensors automatically connect to your SmartSense gateway to provide a self-provisioning installation process. Centralized configuration is provided through our web-based dashboard.

About SmartSense

SmartSense transforms how organizations sense, monitor, and make decisions. Using the Internet of Things (IoT), The SmartSense Sensing-as-a-Service solution changes the way organizations approach compliance, quality, and efficiency.

SmartSense automates pharmacy safety and compliance, product quality, and the monitoring and management of enterprise assets. Today, SmartSense has earned the trust of the nations largest retailers, government, and non-profit institutions in the world. Our systems enable real-time data-driven predictive actions at over 2,000 organizations in 75 countries.
