Temperature Monitoring for Senior Living Facilities

Ensure the safety of your residents and improve quality control with wireless, real-time monitoring that provides insight of critical vaccines, medicines, and quality of food items.

One Solution for Management of Medicine Storage Handling and Nutrition Services

Automated monitoring enables proactive and real-time visibility into fridges, freezers, and hot/cold holding.

Real-time alerts detect and prioritize temperature excursions for perishable foods and medications before they become unsafe.

Corrective actions guide your team through structured procedures to resolve excursions, often without an expensive maintenance call.

Save labor currently dedicated to manual temperature logging and performing everyday repeatable tasks.

Centralized reports and temperature logs are instantly available for audits or inspections, and provide proof of temperature performance.

Leverage **rich analytics** to identify underperforming locations to prioritize improvement strategies.

Resident Safety Delivered.

Ensure the safety and efficacy of critical vaccines, medicines, and samples.

Minimize risk of foodborne illness with proactive temperature monitoring.

Digitize HACCP compliance and automate everyday safety procedures and tasks.

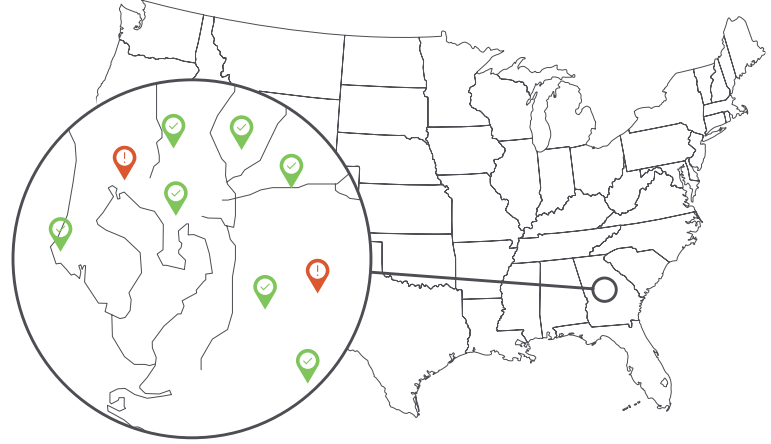

An IoT Platform for Senior Living Operations Oversight

SmartSense provides quickly deployable software and sensors to provide unparalleled visibility for senior living facilities.

Monitor Remote Offsite Clinics

All SmartSense reporting rolls-up into a centralized view to provide complete visibility into all locations at scale, and ensure that every center performs to the same standards as your best location. Spend less time visiting individual facilities to review paper logs, and spend more time improving your operations.

A Vaccines and Medicines

Ensure vaccines and other temperature sensitive medications maintain their efficacy.

B Food Storage

Highly-adaptable, small footprint sensors can be placed in any refrigeration environment.

C Prepared Foods

Wireless probes and digital checklists instantly record temperature of food to eliminate risk.

D Easy, Wire-Free Install

Sensors automatically connect to your SmartSense gateway to provide a self-provisioning installation process.
