An Optimized Open Platform for Patient Safety and Compliance

Healthcare operations rely on precise monitoring for critical environments. Optimizing your cooling assets and environmental conditions across multiple sites is nearly impossible with paper-based processes. And while you work hard to maintain compliance, proving it without automated reports is cumbersome and time-consuming. SmartSense's open platform integrates your healthcare operations with inventory tracking, continuous asset monitoring, and timely alerts, helping you mitigate risk, streamline standard operating procedures, and prevent patient leakage. SmartSense is your partner for connected healthcare solutions that help you deliver on your commitment to your patients.

Elevated Asset Protection

Document and report on asset performance and ambient conditions using real-time enterprise-wide monitoring and corrective action management.

Protect irreplaceable samples and valuable medication while in transit with location services plus condition monitoring that detects unsafe conditions and tampering.

Exceed regulatory requirements for Vaccine storage and handling and twice daily logging requirements.

Easily deploy in healthcare environments using wire-free and cellular-based sensors and gateways that don't rely on your network.

Ensure compliance with NIST certified sensors, documented proof of temperature and humidity levels, and simple NIST recalibration.

Proactively manage assets and inventory through power outages, Wi-Fi disruptions, and other service interruptions.

Ensure High Quality Care and Patient Safety

"Before we had SmartSense, we had to travel to multiple locations monthly to collect the information we needed to monitor and manage critical temperature measurements for our Vaccines for Children (VFC) program. Not only did the SmartSense solution eliminate hours of labor gathering data on-site, but it gave our management team confidence in the integrity of the temperature logs, providing them with centralized visibility into the operations across multiple sites."

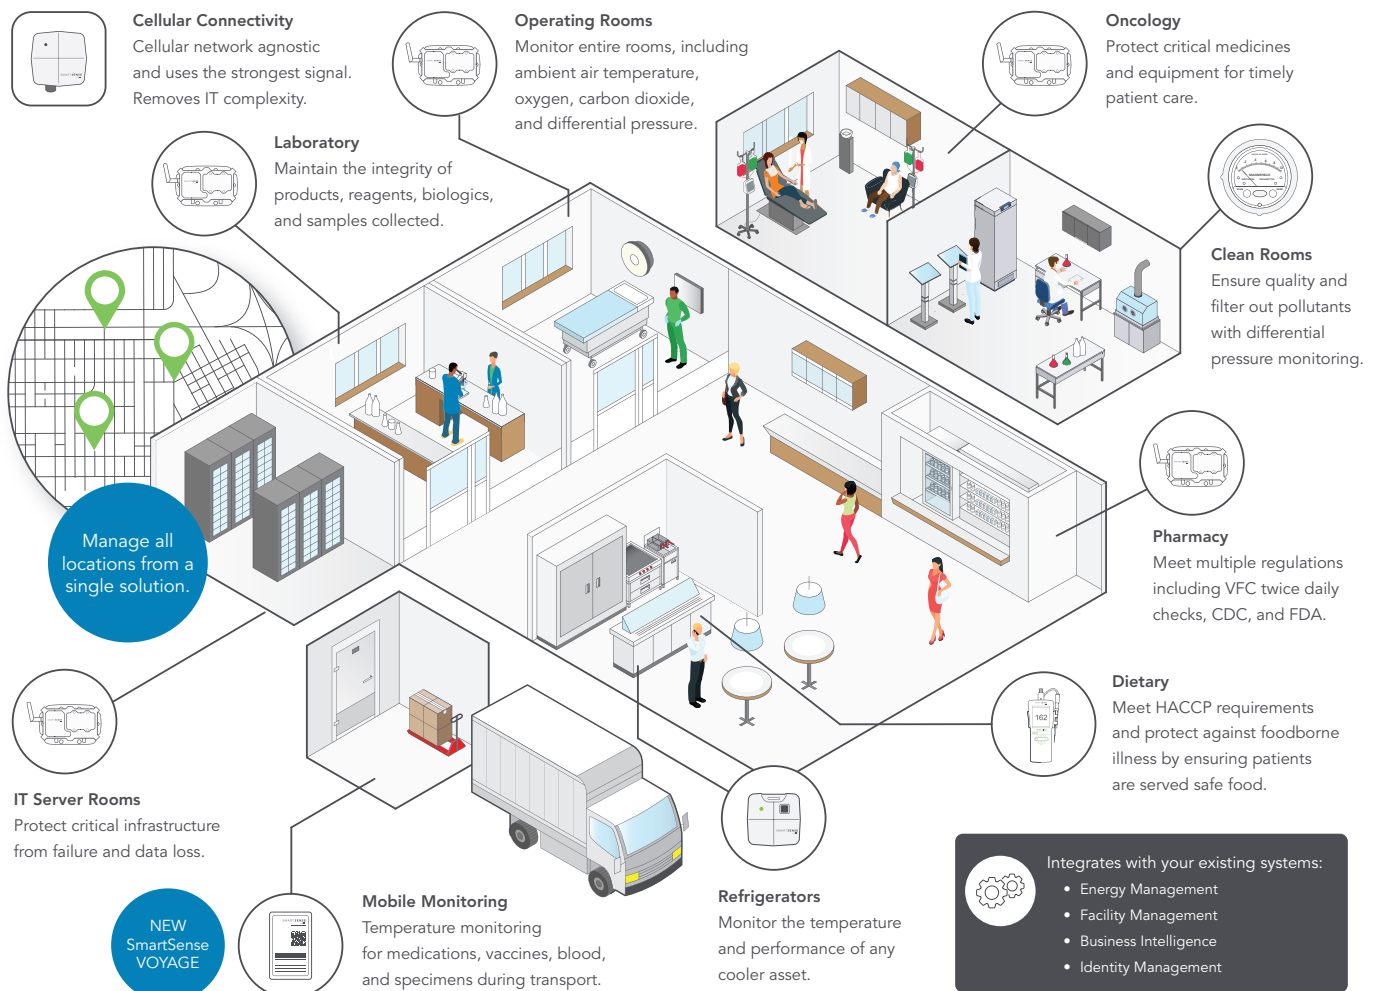

William Black
Director of Pharmacy

Critical Asset Monitoring Across Remote Sites

Our asset-based approach to Sensing-as-a-Service protects your valuable drugs, medications, vaccines, biologics, and food service operations. We help healthcare organizations and hospital networks ensure medication efficacy, improve safety initiatives, and retain patients over their lifetime. Managing inventory location and asset protection across expanding hospital footprints is easy with our plug-and-play, cellular-based solutions.

SmartSense exceeds the CDC Guidelines on Vaccine Storage, along with VFC twice daily requirements, empowering you with complete visibility into remote sites and moving assets at scale. Our platform provides automated reports and easy audit readiness for TJC and state inspections. Press the easy button for analyzing asset performance, understanding failure rates, informing purchase decisions, and preventing risk-inducing breakdowns. Our Sensing-as-a-Service model removes the headaches from compliance and frees up resources for greater operational excellence across your organization.
